

BBTS Annual  
Conference 2016

# Blood Component Quality Monitoring Scheme

**Paul McTaggart**  
Data Manager  
UK NEQAS Haematology

# Blood Component Quality Monitoring (CM)

## UK NEQAS Haematology Participants' Manual

- ▶ Purpose
  - Supplement to the Full Blood Count Scheme
  - Designed for organisations that produce therapeutic blood products
- ▶ Analytes
  - Hb, Hct, PLT
- ▶ Specimens distributed
  - 2 Red Cells, 2 Platelet concentrate
- ▶ 4 distributions per year

# Blood Component Quality Monitoring (CM)

## Initial meeting

- ▶ 2005 Meeting between NBS and UK NEQAS (H)
  - NBS laboratories registered in UK NEQAS (H) FBC
  - FBC Scheme designed for Hospital laboratories
  - Haemoglobin and platelet counts at decision points for clinical use
  - NBS labs measuring at levels in Blood Components
    - Can exceed stated linearity of instrument

# Blood Component Quality Monitoring (CM) Pilot Scheme

- ▶ 2005 – 2006 Pilot Scheme developed
  - Material developed
    - ‘Fresh’ Platelet pools & plasma reduced blood
    - Red Cells used for Haemoglobin
      - Concentration adjusted by centrifigation
    - Platelet pools concentrated by centrifigation
      - Counts adjusted by adding back supernatent
      - Platelets partially fixed.

# Blood Component Quality Monitoring (CM)

- ▶ Specimens distributed
  - 2 Red Cells (Haemoglobin)
  - 2 Platelets
- ▶ Specimens analysed on same day
- ▶ Results returned to UK NEQAS (H)

# Blood Component Quality Monitoring (CM)

First pilot exercise

- ▶ 16 laboratories
  - 7 monitored instruments in two modes
  - 24 instruments
- ▶ Instrument identified by PRN in FB Scheme
- ▶ Mixture of instruments
  - Abbott, Beckman Coulter, Horiba, Siemens, Sysmex
- ▶ All methods statistics

# Blood Component Quality Monitoring (CM)

- ▶ Statistical analysis
  - Non-parametric statistics
    - Median as target
- ▶ Outliers – agreed with NBS
  - Median  $\pm$  2% – Haemoglobin
  - Median  $\pm$  10% – Platelets

## Reference

S. M. Lewis 2001 Quality Assurance. In: Dacie and Lewis Practical Haematology 9<sup>th</sup> edition, SM Lewis, BJ Bain and I Bates (eds), Churchill Livingstone.

# Blood Component Quality Monitoring (CM)

- ▶ 2007 Biomedical Excellence for Safer Transfusion (BEST) laboratories invited to take part in pilots
- ▶ 2008 Haematocrit added to tests
- ▶ 2009 Review meeting
  - NHSBT & UK NEQAS (H)
    - Performance reasonable
    - Immunoplatelet method for platelets in plasma
    - Work towards full scheme status

# Scoring

1

- ▶ 2013 Proposed Scoring
  - Data from 2010 – 2013
- ▶ Deviation Index
  - Chosen coefficient of variation (CCV)
  - Survey Standard Deviation (SD)

# Scoring

2

## ▶ Deviation Index

- Z-score
- ISO13528
- $z - score = \frac{(result - target)}{SD \text{ or } CCV}$
- Consensus target (median)
- SD = estimated SD
- CCV = chosen coefficient of variation

## ▶ Discussed with Scheme Statistician

- Use SD

# Interpretation of z-score

- ▶ From ISO13528

$|z| \leq 2.0$  acceptable

$2.0 \leq |z| \leq 3.0$  warning signal

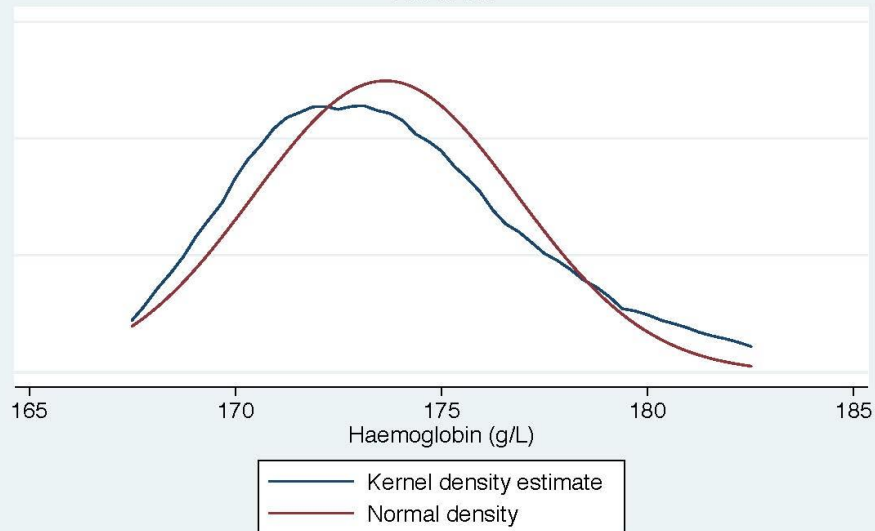

$|z| \geq 3.0$  unacceptable (action signal)

# Scoring

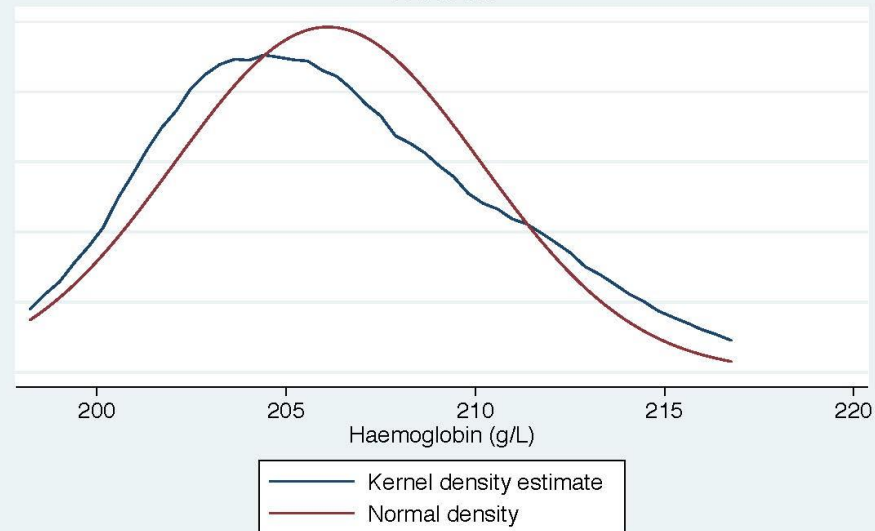

- ▶ Scoring workup using data from 2013 – 2015
  - Scoring modelled on FBC Scheme
    - Absolute DI value taken
    - $DI > 3.5$  truncated to 3.5
    - Sum of last six DI values
    - Multiply by scaling constant (6)
    - Score
      - $Score \geq 100$  – unsatisfactory performance

# Review Meeting February 2016

- ▶ 25 participants
- ▶ 46 reporting methods
- ▶ 23 UK
- ▶ 23 Non-UK
- ▶ 9 countries
  - Finland, France, Gibraltar, Ireland, Italy, Kenya, The Netherlands, Portugal, UK
- ▶ Included in scope of accreditation for ISO17043

# What next?

- ▶ Develop a graphical report format
- ▶ Consider extending the closing date
- ▶ Shadow scoring
- ▶ Consider increasing number of distributions to 6 per year
- ▶ On-line data returns/reports

# Acknowledgements

- ▶ NHSBT
  - Rebecca Cardigan
  - Steve Garner
  - Simon Procter
- ▶ UK NEQAS Haematology
  - Barbara De la Salle
  - Vatsala Soni
  - Caroline Doré
