

TACO Webinar

Wednesday 04 May 2022 | 13:00-14:00 GMT

Transfusion-associated circulatory overload (TACO) continues to be the leading cause of transfusion related deaths in the UK and TACO reports submitted to SHOT are increasing year on year. Please join us for our webinar where SHOT pulmonary working expert group members will provide an overview of the TACO cases submitted to SHOT, cover key learning points and recommendations for safer patient care. The presentation will also include some illustrative cases.

This 1-hour webinar is free to access and will include:

A 40 minute presentation about TACO including case-based presentation by experts from SHOT

A 20 minute interactive Q&A session

An excellent opportunity for CPD through reflective practice - with the following learning objectives:

- Become familiar with the diagnosis, management and investigation of TACO
- Differential diagnosis in a transfusion recipient who develops pulmonary complication post transfusion
- Understand the importance of pre-transfusion TACO risk assessment to mitigate risk in vulnerable patients and investigating cases using the SHOT TACO incident investigation tool

This webinar is relevant to all healthcare professionals involved in transfusion – nursing staff, laboratory staff, clinicians, transfusion practitioners, as well as haemovigilance and risk management specialists

Register for the event here: https://zoom.us/webinar/register/WN_FbDOGxkNThWhiGAUM29bIQ

The Zoom link to the live event is contained in the registration email.

****The event will start promptly, please join at least 5 minutes prior to the start****
